

Finance Analytics

Draw new insights with data visualization

As technology continues evolving, so too are the expectations data analytics and how they may benefit the Office of the CFO. Beyond data analysis and traditional financial statement reporting, data visualization capabilities allow companies to draw new insights to quickly identify areas that need further analysis and share these insights more effectively to support more strategic decision making.

Longview Analytics unlocks the value of data within your Longview Consolidation or Longview Planning application or any other any finance / operational application with a suite of purpose-built dashboards, reports and data visualizations to empower organizations to more effectively manage your finance function.
